General information on service literature

MAN service outlet

A MAN service outlet is a specialist workshop belonging to the MAN service network. The workshop works in accordance with MAN Truck & Bus SE specifications and is authorised to carry out warranty work.

Information about MAN service outlets is available in the MAN Service Portal.

<https://manserviceportal.eu>

Specialist workshop

A specialist workshop is a workshop qualified to carry out work on vehicles. The workshop must have technically qualified personnel plus the required tools and equipment to be able to perform the maintenance and repair work according to MAN Truck & Bus SE specifications.

Maintenance and Service Product Recommendation

The Maintenance and Service Product Recommendation contain comprehensive information:

- on the maintenance system
- on the service products recommended by MAN Truck & Bus SE
- on maintenance intervals for service products
- on fill quantities

The Maintenance and Service Product Recommendation are not supplied with the vehicle.

This is available in the freely accessible area of the MAN Service Portal in the section “Workshop information”.

<https://manserviceportal.eu>

Maintenance checklists

The maintenance checklists describe the scope of the maintenance work that must be performed on the vehicle after a fixed number of kilometres or after a certain time interval.

The content of the maintenance checklists is regularly updated according to technical developments. For this reason, you should always use the current maintenance checklists to perform the maintenance work.

The maintenance checklists are not supplied with the vehicle.

These are published in the MAN Service Portal and can be viewed after successful registration.

<https://manserviceportal.eu>

Introduction

General information on service literature

Maintenance instructions

This describes the maintenance work to be performed on the vehicle.

The maintenance instructions are not supplied with the vehicle.

These are published in the MAN Service Portal and can be viewed after successful registration.

<https://manserviceportal.eu>

Maintenance record

Maintenance work carried out in the maintenance record is confirmed by the MAN service outlet or specialist workshop. If the maintenance record is recorded digitally, the MAN service outlet or specialist workshop will issue printed individual or complete verification on request.

The proper and timely execution of maintenance work is a prerequisite in the event of warranty claims being asserted.

Works not included in the specified scope of maintenance must still be documented in the printed maintenance record (for example replacement of units, retrofits or conversions).

In case of an existing repair and maintenance contract, the cost shall only be covered if maintenance and repair work which is part of the MAN Truck & Bus SE service scope is carried out by an MAN service outlet with MAN genuine parts.

The maintenance record contains information:

- on liability for defects
- on the maintenance system
- on the service products recommended by MAN Truck & Bus SE that are necessary for the driver to operate the vehicle
- on maintenance intervals for the units that may be relevant for a workshop appointment prior to the first annual inspection.

Information on other service products for maintenance and repair can be found in this maintenance and service product recommendation.

Further information

Further information on vehicle maintenance can be found in the Operator's manual, which is included in the vehicle's scope of delivery.

Registered trade marks

MAN Truck & Bus SE and/or other companies of the TRATON GROUP are holders of a variety of registered trade marks in Germany, in other European countries and/or in many other nations worldwide.

You can find a list of registered trademarks used in publications by MAN Truck & Bus SE in the freely accessible area of the MAN Service Portal.

<https://manserviceportal.eu>

If a brand designation is not included in this list and/or is not marked as a trademark in a text, this cannot be interpreted as an indication that said brand designation is not a registered trademark and/or that said brand designation is allowed to be used without prior written consent.

Maintenance work

General information on maintenance work

Maintenance work is preventive in character. It does not involve repairs. Repairs must be dealt with separately.

The specified maintenance work must be performed at an MAN service outlet or specialist workshop by qualified specialist personnel. Having maintenance work performed at an MAN service outlet or a specialist workshop is one of the best ways to ensure that the vehicle retains its value.

Properly completed maintenance records and the copies of the maintenance checklists handed over to the customer by the MAN service outlet or specialist workshop detailing the maintenance work that has been carried out and confirmed allow for complete documentation of the maintenance of the vehicle. They are also a prerequisite for all warranty claims to liability for defects.

Vehicle maintenance

To maintain the operational and road safety of the vehicle, it is essential that you comply with the maintenance appointments and the statutory inspections prescribed by MAN Truck & Bus SE.

ATTENTION

Danger of engine damage

If the maintenance appointments prescribed by MAN Truck & Bus SE are not complied with, particularly when changing the engine oil, there is a risk of (sudden) engine damage, whereby fire cannot be ruled out as an extreme consequence of engine damage.

Therefore:

- Always comply with the maintenance appointments and maintenance work prescribed by MAN Truck & Bus SE.

In addition, the maintenance work set out in the Operator's manual must also be carried out.

Maintenance scope and maintenance intervals

Scope of maintenance and maintenance intervals are specified in the maintenance checklists. Information about change intervals for the service products can be found in the chapter "Maintenance intervals" (📄 page 51).

ATTENTION

Danger of engine damage

If the maintenance intervals are exceeded, particularly when changing the engine oil, there is a risk of (sudden) engine damage, whereby fire cannot be ruled out as an extreme consequence of engine damage.

Therefore:

- Always comply with the service intervals prescribed by MAN Truck & Bus SE.

Structure and designation of the maintenance checklists

Acceptance sheet

The acceptance sheet test contains information regarding:

- Customer
- Vehicle
- Maintenance contract

Initial inspection

The initial inspection must be performed after between 4,000 km and 5,000 km.

Annual inspection

The annual inspection must be performed at least every 12 months.

Maintenance work dependent on time-intervals or mileage

Maintenance work dependent on time-intervals is performed at the same time as the annual inspection. Maintenance work dependent on mileage may be due at the same time as the annual inspection or at another time.

Winter service

To maintain operational and road safety, the winter service is to be performed before the start of the cold season.

Maintenance system

Maintenance interval calculator

Maintenance interval calculator

Vehicles with a service interval calculator switched on

i Note

In vehicles from emission standard Euro 6c, it is not permitted to deactivate the maintenance interval calculator (maintenance system in vehicle).

Exclusively the currently applicable maintenance checklists are to be used to carry out the maintenance work.

The completion of a service must be entered in the vehicle's maintenance interval calculator.

The next service due is determined by a maintenance interval calculator in the vehicle and appears on the driver's display. It is possible to have statutory inspections displayed.

Vehicles without maintenance interval calculator or with a switched off maintenance interval calculator

Exclusively the currently applicable maintenance checklists are to be used to carry out the maintenance work.

The next service due must be entered in the maintenance record. If the maintenance work carried out is recorded in the digital maintenance record, the next service due can be seen in the individual or complete record.

Fuels

Note

Information on the labelling of approved fuels is contained in the Operator's manual of the vehicle.

Information on approved fuels for MAN engines is available in the freely accessible area of the MAN Service Portal.

<https://manserviceportal.eu>

Fuel additives

ATTENTION

Danger of engine damage

Fuel additives are permissible if the fuels remain compliant with the standards EN 590, EN 14214 or EN 15940 when used. Fuel additives that do not guarantee this may cause engine damage.

Therefore:

- Do not use fuel additives that change the quality of the approved fuels in such a way that they no longer comply with the respective standard.

MAN Truck & Bus SE does not accept warranty claims for resulting damage.

Engine starting aid

ATTENTION

Danger of engine damage

Engine starting aids of any kind can cause engine damage.

Therefore:

- Do not use engine starting aids.

MAN Truck & Bus SE does not accept warranty claims for resulting damage.

Mineral diesel fuel

Diesel fuel quality requirement

In all countries of the European Union, the diesel fuel must comply with the standard EN 590.

All vehicles may be operated without restrictions if the diesel fuel contains the amount of FAME which is currently legally permissible in the EU (7 vol. %). In the case of other mixtures, the restrictions and maintenance specifications are the same as those that apply to operation with pure FAME fuel.

From the Euro 6 emission standard onwards, the diesel fuel must comply with the standard EN 590.

Outside the European Union, for the emission standards up to and including Euro 5 and EEV, the country-specific regulations must be observed.

If the sulphur content in the diesel fuel exceeds 50 ppm, the engine oil change interval must be shortened. Information on shortened oil change intervals can be found in the chapter "Maintenance intervals" (📄 page 52).

The maximum permissible sulphur content in the diesel fuel for vehicle configurations up to and including Euro 5 and EEV can be found in the following table:

This is merely technical approval.

However, MAN Truck & Bus SE offers no assurance that the certified emission values of the respective emission standard are complied with when using fuels with a higher sulphur content than in EN 590.

The use of such fuels is only permissible in countries where such use complies with the respective country-specific regulations.

Emission standard	EGR	AGN	Sulphur content in diesel fuel (ppm)
Euro 3	No	No	Not limited
	Yes	No	Up to 500
	Yes / No	CRT	Up to 10
Euro 4	Yes	PM catalytic converter	Up to 50
	Yes	CRT	Up to 10
	No	SCR	Not limited
Euro 5	Yes	PM catalytic converter	Up to 50
	Yes	DOC	Up to 50
	No	SCR	Not limited
EEV	Yes	PM catalytic converter	Up to 50
	Yes	CRT	Up to 10
	No	SCR	Not limited

Water content and total contamination

The permitted water content in the diesel fuel is at most 200 ppm. If this limit is exceeded, a water trap must be installed. The permitted total contamination of the diesel fuel must not exceed 24 ppm.

Fuel recommendation for winter operation

At ambient temperatures of below 0 °C, diesel fuel deposits paraffin crystals which increase the flow resistance in the fuel filter so much that an adequate fuel supply is no longer guaranteed.

To ensure trouble-free operation in winter, you must use winter diesel fuel for which the fuel manufacturer guarantees adequate operational reliability in addition to compliance with the standard.

ATTENTION

Danger of engine damage

Mixing petrol with diesel fuel can lead to engine damage.

Therefore:

- Do not add petrol to the diesel fuel.

Drain the fuel pre-filter and fuel tank as necessary before the onset of winter.

Up to Euro 6c

At ambient temperatures below -10 °C, MAN Truck & Bus SE recommends installing fuel filter heating for vehicles up to emission standard Euro 6c.

From Euro 6d

The fuel is pre-heated via a mixing valve in the fuel pre-filter. This provides a fuel supply down to an ambient temperature of -20 °C. For lower ambient temperatures, the fuel filter must be equipped with an electric heater.

Ambient temperature up to (°C)	Fuel recommendation
0	Summer diesel fuel
-10	Winter diesel fuel
-20	Winter diesel fuel and fuel filter heating
-30	Arctic-quality winter diesel fuel and fuel filter heating

Hazard classes

ATTENTION

Risks to humans and the environment

Diesel fuel can be a risk to humans and the environment.

Therefore:

- Comply with the country-specific statutory and internal provisions regarding occupational and environmental protection.

FAME fuel (biodiesel)

FAME fuel in accordance with EN 14214

Fatty acid methyl ester (FAME) is a fuel composed of vegetable oils, which is also known as biodiesel. The best known example is rapeseed oilmethyl ester (RME).

The FAME fuel must comply with the European standard EN 14214.

Note the following requirements and restrictions when using FAME.

Possible uses and miscibility

Vehicles that are approved for use with FAME fuel according to EN 14214 may also be operated with diesel fuel according to EN 590.

Special specifications apply to vehicles that are approved for use with FAME fuel in compliance with EN 14214 and paraffinic diesel fuel in compliance with EN 15940. Information on this can be found in this chapter (📖 page 20).

Vehicle operation with FAME up to and including emission standard Euro 5 and EEV

If a vehicle is subsequently converted to FAME operation, a function parameter (FUP) must be applied for and installed.

If the vehicle is no longer operated with FAME, the FUP must be removed again.

Vehicle operation with FAME as of emission standard Euro 6

Vehicles that are to be operated with FAME must be ordered with the “Operation with biodiesel” equipment. For which vehicles the “Operation with biodiesel” equipment is available can be found in the information available to the sales organisations of the countries.

With respect to the FAME quality, the operation of auxiliary heaters and the general instructions for the operation of vehicles with FAME, these regulations also apply to Euro 6 vehicles.

Not approved for operation with FAME

- All vehicles with CRT up to and including emission standard Euro 5 and EEV (individual approvals possible by MAN Truck & Bus SE)
- All horizontal common rail engines up to and including emission standard Euro 5 and EEV
- All Euro 6 engines that are not approved for operation with FAME fuel in compliance with EN 14214

Vehicles with CRT up to and including emission standard Euro 5 and EEV only upon approval

In the case of vehicles equipped with CRT, the decision as to whether use of FAME is possible or not depends heavily on the phosphorous and alkali content of the FAME fuel used as well as on the application conditions.

“Contamination” of the catalytic converter from sulphur may occur due to the chemicals involved. In physical terms, “blocking” may occur (by soot clogging the pores). This problem is independent of the engine type, engine or vehicle manufacturer.

A close examination of the operating conditions is therefore required to determine whether and, if applicable, under which circumstances / restrictions it is possible to use FAME fuel.

Vehicles equipped with CRT are only allowed to be operated using FAME following individual approval from MAN Truck & Bus SE.

Further information is available from the MAN service outlets.

If vehicles are operated with FAME without approval from MAN Truck & Bus SE, the liability for defects shall not apply to any resulting damage.

Subsequent conversion to FAME

You can request whether a vehicle can subsequently be converted to FAME operation using a MANTED online application (www.manted.de).

Alternating operation with FAME fuel according to EN 14214 and diesel fuel

For diesel engines that are approved for FAME fuel and diesel fuel, shortened change intervals for engine oil, engine oil filter and fuel filter apply.

Relevant details can be found in the chapter “Maintenance intervals” (📖 page 67).

Injectors:

With some FAME fuels, the injectors may exhibit a tendency to stick. Do not replace the injectors straight away in this case, but run two tankfuls of approved mineral diesel fuel.

Decommissioning

Before decommissioning for longer than four weeks, the entire fuel system must be flushed by running with at least two tankfuls of approved diesel fuel.

Auxiliary heater

The auxiliary heater from Valeo is approved for FAME operation. There is no approval for auxiliary heaters from Webasto, Spheros and Eberspächer.

Warranty

The contractually agreed warranty applies to all engines approved for operation with FAME fuel, except vehicles equipped with CRT.

Agreements made on a case-by-case basis apply for vehicles with CRT.

In case of damage to the injection system (high-pressure pump, common rail injection system, injectors, injection pump, injection nozzles), a fuel sample (about 0.5 litres from the middle of the fuel content) must be ensured. If required, the sample will be requested by the department in the plant that is inspecting the case.

Information on clogged injectors can be found in this chapter (🔍 page 18).

Fuel recommendation for winter operation

ATTENTION

Danger of engine damage

Mixing petrol with FAME fuel can lead to engine damage.

Therefore:

- Do not add petrol to the FAME fuel.

Drain the fuel pre-filter and fuel tank as necessary before the onset of winter.

In case of start problems in winter, use mineral diesel fuel.

Paraffinic diesel fuels

Paraffinic diesel fuels in accordance with EN 15940

Paraffinic diesel fuels must comply with the standard EN 15940. This standard specifies the quality requirements for paraffinic diesel fuels.

Examples of paraffinic diesel fuels:

- HVO: Hydrotreated Vegetable Oils
- GTL: Gas to Liquid

Possible uses and miscibility

Vehicles that are approved for use with paraffinic diesel fuel in compliance with EN 15940 may also be operated using diesel fuel in compliance with EN 590.

For vehicles that are approved for paraffinic diesel fuel according to EN 15940 and for FAME fuel in compliance with EN 14214, proceed as follows in alternating operation: If FAME fuel is changed to paraffinic diesel fuel and vice versa, interim operation with a tank filling of diesel fuel in accordance with EN 590 is recommended. To ensure operational safety, it is also recommended that the fuel filter be replaced afterwards.

Oil change intervals for operation with paraffinic diesel fuels

For diesel engines that are approved for paraffinic diesel fuel according to EN 15940, the same change intervals apply for engine oil, engine oil filter and fuel filter as for operation with diesel fuel according to EN 590. For diesel engines that are approved for FAME fuel and paraffinic diesel fuel, shortened change intervals for engine oil, engine oil filter and fuel filter apply. Relevant details can be found in the chapter "Maintenance intervals" (➔ page 51).

Fuel recommendation for winter operation

The same fuel recommendations as for operation with diesel fuel in compliance with EN 590 apply. Information on this can be found in this chapter (➔ page 15).

Micro-organisms in the fuel system

Micro-organisms when operating with diesel fuel and FAME fuel

Diesel fuels and FAME fuels may be contaminated with micro-organisms, which could multiply under unfavourable circumstances.

These micro-organisms may multiply when exposed to condensation water, sulphur, phosphorus, nitrogen, oxygen, trace elements and fuel additives. Depending on the temperature conditions, the micro-organisms may multiply to various extents. This leads to the formation of fibrous fungal braids and sludge, leading to microbial corrosion in the fuel tank and fuel lines. The fuel filters then become blocked with rust particles and biomass.

The result is a reduction in engine performance, ultimately ending in the vehicle becoming immobilised. The fuel filters then have to be replaced at relatively short intervals.

Preventive measures

To prevent the formation of microorganisms in the fuel system:

- Keep storage tanks clean
- Only park the vehicle for an extended period of time with a full fuel tank

Remedies

If fuel system or storage tanks have already been affected by microorganisms, MAN Truck & Bus SE recommends using the following disinfectant:

- Bakzid

Please note that the fuel tanks or storage tanks need to be drained prior to the application of disinfectants because the disinfectant binds with water.

Water bound in the fuel can damage the injection system.

Note

Always refer to the current safety data sheets and technical data sheets before using the disinfectants indicated.

CNG fuel (natural gas and biomethane)

General information about natural gas and biomethane

Natural gas is a gas that comes naturally from the earth. Its chemical composition varies considerably depending on where it is found.

Biomethane can also be used as an alternative to natural gas. Biomethane is created by processing biogas.

Natural gas and biomethane as CNG fuel

High compression of the gas is necessary to be able to use natural gas and biomethane as a fuel for mobile applications in the automotive area. Only then can the energy content be stored in a limited volume.

Therefore, natural gas and biomethane are stored in the form of CNG (Compressed Natural Gas) at a pressure of 200 bar.

Properties of CNG

- Colourless, augmented with odour-intensive substances for easy detection
- Highly flammable
- Gaseous storage at approx. 200 bar
- Lighter than air, rises to the top

CNG fuel quality requirements

Natural gas and biomethane for use as a fuel in CNG vehicles must comply with standard EN 16723.

In addition, biomethane must be free from harmful gas admixtures (phosphorus, silicon, arsenic, fluorine, chlorine) that can impair the function of the 3-way catalytic converter.

Vehicles that use CNG as a fuel must comply with the conditions of legal standard ECE-R 110.

Methane content in natural gas

Due to the varying methane content (CH_4) in natural gas, CNG is divided into two groups:

- H-gas (High, high net calorific value – 10.0 to 11.1 kWh/m³),
Methane content 87 to 99 Vol. %
- L-gas (Low, low net calorific value – 8.2 to 8.9 kWh/m³),
Methane content 80 to 87 Vol. %

L-gas has a somewhat higher nitrogen content (N_2) and carbon dioxide content (CO_2) than H-gas. As a result, L-gas has a lower calorific value, which means that the absolute gas consumption in a vehicle operated with L-gas is higher than in a vehicle operated with H-gas.

In comparison with CNG vehicles with Motronic ME7 engine control unit (installed until 2009), the natural gas quality does not need to be adjusted in CNG vehicles with EGC4 engine control unit (installed from 2010).

The fuel mixture generation system of the engines automatically adjusts to the currently existing natural gas quality.

Methane content in biomethane

In contrast to natural gas, biomethane always has a high net calorific value with a methane content of up to 98 Vol. %.

Exhaust gas aftertreatment (AGN) with gas engine (CNG)

For vehicles with a gas engine (CNG) the exhaust gas is aftertreated in a downstream three-way catalytic converter integrated into the silencer.

For vehicles with diesel engines, no particulate filters or SCR catalytic converter are required for vehicles with gas engines (CNG) in order to comply with the emission limits for EEV and Euro 6 engines.

AdBlue

Effect of AdBlue

By adding a reducing agent (trade name AdBlue fluid) to the emission control system, pollutants in the exhaust gas treatment system (nitrogen oxide NO_x) are converted into environmentally friendly substances (nitrogen and water vapour).

Note

If a vehicle is equipped with an AdBlue system, operation of this vehicle with a reducing agent is necessary in order to comply with emissions standards, and is therefore a condition for type approval within the EU.

ATTENTION

Danger of engine damage

AdBlue is not an additive and can lead to engine damage in combination with diesel fuel.

Therefore:

- Do not mix AdBlue fluid with diesel fuel.
- Only use AdBlue **without additives/auxiliary agents** in accordance with the following standards:
 - ISO 22241
 - DIN 70070
- Only use suitable storage and filling systems in order to avoid loss of quality.

Environmental note

AdBlue is easily decomposed by microbes. It is therefore readily biodegradable. This means that AdBlue presents very little danger to the environment.

Therefore, in Germany, AdBlue has been placed in the lowest water hazard class WHC1. AdBlue is an aqueous solution which poses no significant risks according to the applicable EU chemical laws.

Service products in accordance with MAN company standard

Use of service products

MAN recommends using MAN Genuine service products.
MAN reserves the right to refuse any material defects or warranty claims if the fault for which such claims are made by the customer originates from the use of a specific service product from another supplier.

If several specifications are permissible, the initial fill **is written in bold**.

i Note

Further information on service products can be found in the service product database or is available from the MAN service outlets.

<https://manserviceportal.eu>

Service products

Service products in accordance with MAN company standard

MAN Genuine Oil

- less friction, more efficiency. Engine oil, gearbox oil, axle oil

The most important thing when it comes to motorisation and technology is without a doubt the optimum coordination of all components. MAN Genuine Parts fulfil this prerequisite. MAN Genuine Oil is the perfect complement to the core components of an MAN vehicle, for engine, gearbox, driven axles and transfer case. MAN Genuine Oils are proven to provide optimum protection against wear, and thus contribute to a longer lifespan and reduce overall operating costs (TCO).

Only the best MAN oil is good enough for MAN vehicles. MAN Genuine Oil.

MAN Genuine Oil: Our favourites

MAN Genuine Oil is always the right choice. We recommend these favourites.

**Paragon MAN 3977 5W-20****MAN Genuine Engine Oil**

- Increased fuel savings compared to Excellence MAN 3677 with identical performance characteristics
- Service intervals up to 140,000 km (for MAN engines from Euro 6d)
- Service intervals for diesel particulate filters of up to 850,000 km
- Low viscosity Fuel Economy oil in accordance with the state of the art

**Excellence MAN 3677 5W-30****MAN Genuine Engine Oil**

- Service intervals of up to 140,000 km
- Service intervals for diesel particulate filters of up to 850,000 km
- Longer service life, even under extreme loads
- High efficiency and performance with minimal oil consumption

**Flexor MAN 341 Z5 75W-80****MAN Genuine Gearbox Oil**

- High oxidation resistance and thermal stability, even with long oil change intervals
- Optimum viscosity for unproblematic cold starts and smooth shifting at low temperatures
- Long service life of the gearbox, even under extreme operating conditions and ambient temperatures
- High efficiency and performance

Note: Specific information on service products and other regulations in this Maintenance and Service Product Recommendation must be observed!

Service products

Service products in accordance with MAN company standard

Nexus MAN 342 S1 75W-90

MAN Genuine Axle Oil

- High oxidation resistance and thermal stability, even with long oil change intervals
- Prevention of oil sludge formation thanks to cleaning effect
- Long service life of driven axles and transfer cases, even under extreme operating conditions and ambient temperatures
- High efficiency and performance

Note: Specific information on service products and other regulations in this Maintenance and Service Product Recommendation must be observed!

Euro 6d/e	E1856LOH01/02/03/04, with three-way catalytic converter	No	Yes	No

For vehicles with a maintenance interval calculator, the vehicle parameters must be reprogrammed by the workshop in case of a change of oil specifications.

Further information about oil specifications and oil change intervals for gas engines can be found in the chapter “Maintenance intervals” (📖 page 72).

Further requirements for engine oils

Low-temperature limits

Engine oil additives

ATTENTION

Danger of engine damage

Engine oil additives can lead to engine damage.

Therefore:

- Do not use engine oil additives.

MAN Truck & Bus SE does not accept warranty claims for damage resulting from engine oil additives.

Miscibility of engine oils

Engine oils from different manufacturers, but in accordance with the same specifications, can be mixed.

Mixing oils of different specifications is not permissible.

Exception up to and including emission standard Euro 5 and EEV:

- M 3377 and M 3277 may be mixed

Exception from Euro 6d emission standard:

- M 3977 and M 3677 may be mixed

Shortened engine oil change intervals depending on the sulphur content in the diesel fuel

Engine oil change intervals may be reduced depending on the sulphur content in the diesel fuel.

Information on shortened oil change intervals can be found in the chapter "Maintenance intervals" ( page 51).

Service products

Oil for drive unit (electric)

Oil for drive unit (electric)

Coolants

Coolants

MAN Genuine Corrosion Protection and Antifreeze

The MAN Genuine anti-corrosion and antifreeze agent offers protection against corrosion and cavitation at the same time as providing anti-freeze protection to -37 °C.

Pipe-constricting deposits or gas bubbles can result in extreme pressure and temperature peaks that can permanently damage the system. MAN genuine corrosion protection and anti-freeze liquid is optimally tuned to the cooling systems and their seal materials and coatings, and therefore provides maximum protection, optimum function and cost advantages.

Where available, use MAN genuine corrosion protection and antifreeze.

Antifreeze and anti-corrosion agents

Antifreeze and anti-corrosion agent in accordance with company standard MAN 324

Use and properties of antifreeze and anti-corrosion agents according to company standard MAN 324	MAN 324 type Si-OAT (recommended), MAN 324 type Si-OAT plus	MAN 324 type NF
Colour	Pink	Not prescribed
Application	For all emissions standards Obligatory as of Euro 6	Up to and including Euro 5, EEV
Utilisation forbidden	-	From Euro 6
No mixing	With N, SNF and N-Arctic types	With SNF and N-Arctic types
Coolant hose	EPDM hoses (black) in accordance with MAN 334 Type 5 (up to 2.5 bar relative pressure) and Type 8 (up to 3.5 bar relative pressure) recommended	
Standard mixing ratio, antifreeze / water	50% by vol. antifreeze 50% by vol. water	50% by vol. antifreeze 50% by vol. water
Antifreeze	down to -37 °C	down to -37 °C
Mixing ratio for antifreeze / water at low temperatures (cold climate package)	60% by vol. antifreeze 40% by vol. water (if temperatures remain higher than -37 °C, change to standard mixing ratio)	60% by vol. antifreeze 40% by vol. water (if temperatures remain higher than -37 °C, change to standard mixing ratio)
Antifreeze	down to -50 °C	down to -50 °C

Service products

Coolants

Use and properties of antifreeze and anti-corrosion agents according to company standard MAN 324	MAN 324 type SNF	MAN 324 type N-Arctic
Colour	Not prescribed	Not prescribed
Application	Up to and including Euro 4	Up to and including Euro 4
Utilisation forbidden	From Euro 5 EEV	From Euro 5 EEV
No mixing	Mixing with other types not permissible	Mixing with other types not permissible
Permissible coolant hoses	Only EPDM hoses (black) no silicon tubing (blue)	Without restriction
Standard mixing ratio, antifreeze / water Antifreeze	40% by vol. antifreeze 60% by vol. water down to -27 °C	50% by vol. antifreeze 50% by vol. water down to -37 °C
Mixing ratio for antifreeze / water at low temperatures (cold climate package) Antifreeze	- -	65% by vol. antifreeze 35% by vol. water (if temperatures remain higher than -37 °C, change to standard mixing ratio) down to -65 °C

ATTENTION

Danger of engine damage

The ability of the coolant to protect against corrosion may decrease over the course of the service life, which can lead to engine damage.

Therefore:

- Replace coolant when it turns brown or deteriorates.

Anti-corrosion agent without antifreeze in accordance with company standard MAN 248

If the use of antifreeze is not necessary for certain individual cases, anti-corrosion agents according to company standard MAN 248 must be used.

Use of anti-corrosion agents without antifreeze is not permissible in Euro 5, EEV and Euro 6 engines.

Do not mix anti-freeze and anti-corrosion agent according to company standard MAN 248 with anti-freeze and anti-corrosion agent according to company standard MAN 324.

i Note

Further information is available from the MAN service outlets.

Water quality

Analysis values of water	
Appearance	Colourless, clear, free from contamination
Total hardness	German hardness: max. 20 °dH
	French hardness: max. 35.6 °fH
	British hardness: max. 25 °e
Chlorides	max. 100 mg/l
Sulfates	max. 150 mg/l
pH value at 20 °C	6.5 to 8.5

If tap water with these values is not available, use fully desalinated, distilled or condensed water.

Replacing and disposing of coolant

Changing coolant

Information about the intervals specified for changing the coolant can be found in the chapter “Maintenance intervals” (📖 page 76).

Environmental note

Disposing of coolant

Treat undiluted antifreeze and anti-corrosion agents as hazardous waste.

Follow the instructions issued by the relevant local authority when disposing of used coolants (mixture of anti-freeze or anti-corrosion agent with mains water).

There are disposal companies that specialise in the recycling of coolants containing anti-freeze agents and anti-freeze concentrates. If you decide to use these companies, you must collect the product groups separately and not mix them with different types of service products (oils, solvents, fuels).

Gearbox, retarder and axle oils

After the MAN company standard is the oil type designation which is generally composed of a letter and a number and provide the user with information about a suitable unit, oil quality and performance level of the oil. Within an oil type, the lowest number (e.g. Z2) always signifies the lowest oil change interval and oil performance level, while the highest number (e.g. Z5) signifies the highest of these. Currently, there are the following oil types:

Oil specification in accordance with MAN company standard	Oil type	Application
MAN 339	V1, V2, V3	DIWA automatic gearbox oils for hydraulic gearbox
	Z4	Ecomat automatic gearbox oils for hydraulic gearbox
	Z11, Z12, Z13, Z14	EcoLife automatic gearbox oils for hydraulic gearbox
MAN 341	Z2, Z4, Z5	High-pressure gearbox oils for manual gearboxes Ecolite, Ecomite, Ecoshift and automated manual gearbox MAN TipMatic AS/TX, TipMatic Mid
	MB	High-pressure gearbox oils for manual gearbox GO 210-6
	VR	High-pressure gearbox oils for Voith retarder
	Z5	High-pressure gearbox oils for the hybrid adapter gearbox
	Z5 (Castrol Syntrans Z Long Life 75W-80)	High-pressure gearbox oil for hybrid summation gearbox
M 3277	-	High-performance diesel engine oils for Voith retarder
MAN 342	M2, M3	Highest-pressure gearbox oils for axles; mineral base oil
	S1, S2	Highest-pressure gearbox oils for axles; synthetic base oil

Further information about oil specifications and oil change intervals for the gearbox, retarder and axles can be found in the chapter “Maintenance intervals” (pages 77, 85 and 86).

Service products

Gearbox, retarder and axle oils

Further requirements on gearbox, retarder and axle oils

Low-temperature limits

Miscibility

Oils that correspond to the same specifications can be mixed (for example, MAN 342 type M3 and MAN 342 type S1). When mixing various oil types (e.g. MAN 342 type M3 and MAN 342 type S1), the shortest oil-change interval applies.

It is not permitted to mix oils of different specifications (for example, MAN 342 and MAN 341).

Hydraulic oils

Steering system

City bus, intercity bus, coach and chassis

Steering system	Oil specification in accordance with MAN company standard
All steering systems	MAN 339 L1

Clutch

City bus, intercity bus, coach and chassis

Clutch unit	Ambient temperature (°C)	Oil specification in accordance with MAN company standard
Clutch unit	-35 to +75	M 3289

ATTENTION

Risk of damage to the clutch

Mixing or refilling with brake fluids causes significant damage to seals and hoses, which can lead to clutch unit failure.

Therefore:

- As per MAN company standard M 3289, do not mix hydraulic oil with brake fluid.

Service products

Electric refrigerant compressor for battery cooling module (cooling and heating system of the high-voltage battery)	Zerol Ester 68 hybrid

ATTENTION

Risk of damage to the air-conditioning system

Mixing refrigerator oils or using additives leads to damage to the refrigerant compressor and the air-conditioning system.

Therefore:

- Do not mix refrigerator oils with each other.
- No additives should be mixed into the refrigerator oil or the refrigerant.
- Do not use additives such as fluorescing agents or contrast agents for leakage checks or leak tests.

Solid lubricants

Trailer coupling

City bus, intercity bus, coach and chassis

Trailer coupling	Component	Specification	Alternative specification
Rockinger RO 100	Contact surfaces base plate and exchange plate	MAN 283 Li-P 2	white lubricating grease 622 Chesterstone
Rockinger RO 243	Coupling pin, bearing seat, automatic unit	MAN 283 Li-P 2	Multi-purpose grease (lithium-12-hydroxystearate type) without solid lubricants, NLGI Class 2
Rockinger RO 400, RO 430	Automatic unit	MAN 283 Li-P 2	Multi-purpose grease (lithium-12-hydroxystearate type) without solid lubricants, NLGI Class 2
	Coupling bolts, bearing rings, lower jaw bearing, drawbar eye (RO 400), pressure rod (RO 430)	Castrol Olista Longtime 3 EP	Multi-purpose grease (lithium-12-hydroxystearate type) without solid lubricants, NLGI Class 3, RHS 2020B (RO 400)

Corrosion protection

Underbody seal, body cavity preservation and corrosion protection

City bus, intercity bus, coach and chassis

i Note

Damage (cracks, deformations, scrapes, stone damage and corrosion) to the underbody and the underbody seal and the chassis must be documented in the maintenance record.

Skeleton	Component	Specification
Underbody	Underbody (without wheel housing plates)	Underbody seal M 3068-C, DINITROL AB 429 IQ, Valvoline Tectyl 5660, DINITROL AB 810 E, M 3068-D (Gromalit) ¹
	Wheel housing plates	Underbody seal M 3068-D (Gromalit) ¹
	Lower edge of side wall	Edge protector M 3068-D (Gromalit) ¹
Cavities	Skeleton profile	Protective body cavity coating M 3082-B2/B3, Anticorit CPX 3373, Anticorit DS 329 HS, Anticorit DS 329 VS, Tectyl 210 R

¹ If Gromalit underbody seal is applied to the vehicle, this can be identified by the sticker on the last page in the maintenance record.

Service products

Battery, wiper system, tyres and rims

Battery, wiper system, tyres and rims

Battery

Battery	Specification
Acid density with fully-charged battery	1.28 g/cm ³ at 20° C
Battery fluid	Distilled water
Terminal grease	Technical Vaseline S-743 or TL 9150-0042

Windscreen wiper and headlight cleaning system

Only use windscreen washer fluid with a suitable cleaning additive.

Do not add detergent to the windscreen washer fluid because it

- has an effect on diesel soot and contamination by insects,
- is only effective at temperatures that are not normally attained in the washer fluid and
- can cause damage to paintwork, plastic and rubber parts under certain circumstances.

At low ambient temperatures, use windscreen washer fluid with antifreeze and observe the manufacturer's temperature information.

When using concentrates, observe the information about the mixing ratio with tap water.

Tyres and rims

Tyres and rims	Specification
Assembly product, slip additive	M 3224

General information on maintenance intervals

Vehicle-specific units

Information about the units installed in the vehicle can be viewed in the MAN Service Portal after entering the VIN.

Each unit in a vehicle has a model plate. This can also be used to identify the unit.

Specifications

Information on the operating media recommended for a specific unit by MAN Truck & Bus SE can be found in the column titled Oil specification in accordance with MAN company standard in the following tables.

If several specifications are permissible, the respective **specification written in bold** denotes the initial fill.

The assignment of engine oil to the emission standard, exhaust system and diesel fuel sulphur content can be found in the chapter "Service products" (📄 page 29).

Oil change and maintenance intervals

The maintenance work is carried out after a specified time interval or mileage, depending on which event occurs first.

The listed values are maximum values. They depend on the quality of the oil used, on the type of unit installed and on the vehicle application.

It is also relevant whether the maintenance interval calculator is switched on or switched off.

In the case of vehicles which have their maintenance interval calculator switched on, the oil change interval depends on the operating conditions. The indicated maximum mileage may be reduced. The relevant indication is the message in the driver's display that a maintenance service is necessary.

The currently applicable maintenance checklists must be used to carry out the maintenance work.

ATTENTION

Danger of engine damage

If the maintenance intervals are exceeded, particularly when changing the engine oil, there is a risk of (sudden) engine damage, whereby fire cannot be ruled out as an extreme consequence of engine damage.

Therefore:

- Always comply with the maintenance intervals prescribed by MAN Truck & Bus SE.

Note

In vehicles from emission standard Euro 6c, it is not permitted to deactivate the maintenance interval calculator (maintenance system in vehicle).

Maintenance intervals

General information on maintenance intervals

Shortened oil change intervals for diesel engines

High sulphur content in diesel fuel

The oil change intervals are shortened when operating the vehicle with a high sulphur content in the diesel fuel.

Information on the permissible sulphur content in the diesel fuel can be found in the chapter "Service products" (📖 page 14). Information on shortened oil change intervals can be found in this chapter (📖 page 54).

Diesel engines approved for FAME fuel and diesel fuel

The oil change intervals are shortened for diesel engines that are approved for FAME fuel and diesel fuel.

Information on the conditions for the use of FAME fuel can be found in the chapter "Service products" (📖 page 17). Information on shortened oil change intervals can be found in this chapter (📖 page 67).

Shortened oil change intervals for axles and retarder

High temperatures

The oil change intervals for the rear axle and retarder are reduced during vehicle operation at high temperatures.

The following is classed as operation at high temperatures:

- if the average monthly temperature in more than 2 months per year is higher than 25 °C
- or if temperatures higher than 40 °C occur on more than 7 days per year

Information about shortened oil change intervals for the retarder can be found in this chapter (📖 page 85).

Information about shortened oil change intervals for axles can be found in this chapter (📖 page 86).

Change-over, initial fill for engine

Diesel engine	Vehicle	Period	Oil specification in accordance with MAN company standard
D0836LOH80/81 Euro 6c	Coach chassis	until 31.10.2016	M 3677
		from 01.11.2016	M 3377 ¹
D0836LOH78/79/80/81/82/83/84/85 Euro 6c	City bus and city bus chassis	until 31.10.2016	M 3677
		from 01.11.2016	M 3377 ¹

- ¹ The engines initially filled with M 3377 are labelled with an appropriate sticker in the area of the oil filter housing or the oil filler neck. In the event of an oil changeover, stickers that are no longer correct must be removed if necessary or made permanently illegible.

ATTENTION

Danger of engine damage

The ability of the coolant to protect against corrosion may decrease over the course of the service life, which can lead to engine damage.

Therefore:

- Replace coolant when it turns brown or deteriorates.

Gearbox

Hydraulic gearbox (automatic gearbox)

¹ If Gromalit underbody seal is applied to the vehicle, this can be identified by the sticker on the last page in the maintenance record.

General information about fill quantities

Engine oil

The specified fill quantity is the fill quantity in litres required for oil change. The decisive factor in obtaining the precise fill quantity is to check the oil level on the oil dipstick. Information on checking the oil level can be found in the Operator's manual. Information on how to change the oil can be found in the Maintenance Instructions.

The top-up quantity is the quantity between MIN and MAX on the oil dipstick.

Coolant

The fill quantities indicated are fill quantities for the dry unit's initial fill. When changing the coolant, the fill quantity may be a few litres less. The specified fill quantities apply for a standard mixing ratio of 50 vol. % antifreeze and anti-corrosion agent and 50 vol. % water. It is imperative that the coolant expansion vessel is filled up to the MAX marking. Information on checking the coolant level can be found in the Operator's manual. Information on how to change the coolant can be found in the Maintenance Instructions.

Gearbox oil, retarder oil

The decisive factor in obtaining the precise fill quantity is to check the oil level. Information on checking the oil level and on performing the oil change can be found in the Maintenance Instructions.

Axle oil

The decisive factor in obtaining the precise fill quantity is to check the oil level. Information on checking the oil level and on performing the oil change can be found in the Maintenance Instructions.

Hydraulic oil, refrigerator oil

The decisive factor in obtaining the precise fill quantity is to check the oil level. Information on checking the oil level and on performing the oil change can be found in the Maintenance Instructions.

Refrigerant

The fill quantities for the refrigerant are specified for each model series.

Meaning of "Air-conditioning system xxx with driver's workplace".

- With air conditioning in the driver's workplace

Meaning of "Air-conditioning system xxx without driver's workplace".

- Without air conditioning in the driver's workplace

S6-85	without intarder	11.5	-
GO 210-6	without retarder	13	-

MAN TipMatic (automated manual gearboxes)

MAN TipMatic	Notes	Fill quantity for oil change (Litres)	Fill quantity for initial fill / after repair (Litres)
TipMatic 12AS-2001, 12AS-2301, 12AS-2701	with intarder 2	12	21
TipMatic 12AS-2001, 12AS-2301	with intarder 3	19	22.5
TipMatic 12AS-2130	without intarder	11	12
TipMatic 12AS-2131	with intarder 2	12	21
	with intarder 3	17	23
TipMatic Mid 12AS-1210	without intarder	7.5	7.8
TipMatic 12TX-2611, 12TX-2811	with intarder 3	19	22.5

Fill quantities

Gearbox oils

Adapter and summation gearboxes

Lion's City A37 Hybrid

Gearbox	Notes	Fill quantity (Litres)
Adapter gearbox	-	2.3 ¹
Summation gearbox	with "Oil Level" pictogram	2.9 ²

- ¹ The oil level in the sight glass takes priority - not the specified fill quantity. The fill quantity only provides a rough indication of the amount of oil required.
- Oil level centrally in inspection window on model plate with MAN item number 36.38200-6001
 - Oil level top edge of sight glass on model plate with MAN item number 81.38200-6004
- ² Summation gearbox with "Oil Level" pictogram. The oil level in the sight glass takes priority - not the specified fill quantity. The maximum fill quantity is reached when the oil level has reached the top edge of the round opening in the middle of the sight glass (reflector).

Retarder oils

Retarder	Fill quantity for oil change (Litres)	Fill quantity for initial fill / after repair (Litres)
VR-120	4.5	6.5
VR-133	7.5	10 - 11
VR-133-2	6	9 - 9.5
VR-115-E	6.7	7.5

Fill quantities

Electric drive unit

- Oil change intervals, 74
- Oil fill quantity, 108
- Permissible service products, 34

Engine oil

- Additional information, 33

Change intervals, 51 - 53, 54 - 66, 67 - 71, 72 - 73
 Fill quantities, 106 - 107
 MAN Genuine Oil, 26 - 28
 Permissible service products, 29 - 33
 Exhaust system, Exhaust gas aftertreatment, exhaust gas
 recirculation, 23, 29 - 31, 32, 54 - 66, 67 - 71, 72 - 73

F

FAME fuel (biodiesel)
 Additional information, 21 - 23
 Engine oil change intervals, 67 - 71
 Requirements and operating conditions, 17 - 23
 Fill quantities, 105
 Fuel
 CNG fuel, 22 - 23
 Diesel fuel, 14 - 23
 FAME fuel (biodiesel), 17 - 23
 Paraffinic diesel fuels (e.g. HVO, GTL), 20 - 23

G

Gearbox oil
 Additional information, 42
 Change intervals, 77 - 84
 Fill quantities, 115 - 118
 MAN Genuine Oil, 26 - 28
 Permissible service products, 41
 Greasing points, Maintenance intervals, 101 - 103

H

Hydraulic oil
 Change intervals, 95 - 98
 Fill quantities, 121 - 122
 Permissible service products, 43 - 44
